SCENARIO MODELING

Scenario Modeling enables you to effortlessly consult your builder-clients on exactly how design and specification changes will affect all of their energy models' performance.

You simply define a set of design changes and your clients' performance metrics, and Ekotrope evaluates each set on 1 - 1,000 energy models in minutes. You receive individual and cumulative results so you can show your builder the best path forward.

QA TRACK

QA Track takes the headache and accounting out of your annual QA report.

The tool tells you exactly who and how much QA is needed and completed so you can verify you're up-to-date with just a glance. QA Track makes sure you ace your annual QA Review with ease.

INSPECTION SYNC

Inspection Sync allows you to sync your inspection app with Ekotrope energy models and eliminate duplicate data entry.

Simply export the data from your preferred inspection app to a standard data format and upload it into Ekotrope RATER. Ekotrope automatically updates all applicable fields of the energy models and send you a submission status report.

Benefits:

- Easily Resolve Builder Change Requests
- Find new solutions to increase 45L tax credits

Features:

- Analyze up to 1,000 energy models at once.
- Model 15 design changes and 20 scenarios per analysis.
- Support for large and small analysis projects

Benefits:

- Saves Time
- Ensures QA is up to date

Features:

- QA checklist pre-filled and saved in Ekotrope RATER.
- Auto-selects energy models for File QA.
- Annual QA Report is created via Ekotrope and pre-filled.

Benefits:

- Deliver Same Day Reports
- Seamless import process

Features:

- Searches and finds the correct mechanical system for your energy model based on the model number recorded during inspection.
- Updates all of your team's energy model inspections in a minute - works for MF and SF.
